Instawards Statement of Work (SOW)
30-Day Scoped Engagement

1. Project & Team Information

Project Name:	Stellar Agent Auth
Builder / Team Name:	Doğukan AKAR
Primary Contact (Name + Email):	Doğukan, dogukanakarc@gmail.com
Ambassador Chapter:	Stellar Turkiye
Ambassador Chapter Lead:	**İrem Koçi(Stellar Türkiye)**
Date Submitted:	30 September 2026
Suggested Sprint Start Date:	

2. Instawards Overview & Intent

2.1 Instawards Purpose (for Builder Context)

Instawards are designed to support short, clearly scoped, execution-focused work that helps a project make tangible progress toward building on Stellar. Instawards are meant to fund specific, achievable outcomes that can be completed and demonstrated within 30 days or less.

This SOW represents a shared commitment between the Builder and the Ambassador Chapter Lead on what will be delivered, why it matters, and how success will be verified.

3. Problem Statement & Objective

Problem Being Addressed	What specific problem, gap, or blocker is this Instaward intended to solve?	AI agents need to pay for online services, but giving them a wallet key gives too much control. Stellar does not yet have a simple example that checks an agent and limits what it can spend.
Objective of This Instaward	In one or two sentences, what will be true at the end of 30 days if this Instaward is successful?	In 30 days, I will show a working Stellar testnet flow where a checked AI agent can pay only within rules set by the wallet owner. The demo will also show blocked payments and owner revocation.

4. Scope of Work (30-Day Deliverables)

Instawards Statement of Work (SOW)
30-Day Scoped Engagement

Important guidance: This scope must be achievable within **30 calendar days**. If the work feels larger, it should be reduced or split into more achievable phases.

4.1 In-Scope Deliverables

Deliverable	Description (What will be built or produced?)	Why this matters
Deliverable 1	Build a Stellar registry that records an agent, its signing account, and a time-limited check result from an approved verifier. Inspiring ERC-8126	The wallet can confirm that the agent passed the required checks before allowing a payment.
Deliverable 2	Build a Soroban smart wallet with payment limits, approved assets and recipients, an end date, pause, and revocation. Inspiring ERC-8196	The agent can do useful work, while the owner keeps control of the money and can stop access.
Deliverable 3	Provide a developer kit, simple demo, tests, testnet deployment, and setup guide. Show one allowed payment and several blocked payments. After succesfull tests, testnet deployment.	A clear demo lets verify the result and helps Stellar builders reuse the work.
Out-of-Scope (Explicitly Not Included) List anything that might be assumed but is not included in this Instaward scope.		
Security audit.	Every feature from ERC-8126 and ERC-8196	A general consumer wallet or open access to any contract

4.2 Deliverable-Aligned Budget Request

Requested Budget Amount	Rationale for Budget Request
$5000	Funds the focused 30 day engineering and development sprint which covers build, tests, documentation, demo

	and guide.

5. 30-Day Execution Plan & Timeline

5.1 Weekly Breakdown

Week	Planned Work	Expected Output
Week 1	Study ERC-8126 and adapt its AI agent identity and verification model to Stellar. Confirm the simple payment example. Build agent registration and the verifier result flow.	An agent can be registered, checked, and read from the Stellar testnet.
Week 2	Study ERC-8196 and build its limited wallet permission model with Soroban. Build the smart wallet rules: limits, approved recipients, end date, pause, and revocation.	One payment succeeds. Payments outside the owner's rules are blocked.
Week 3	Connect the developer kit and demo to the contracts. Add clear allowed and blocked examples.	The full check, permission, payment, and revocation flow works from the demo.
Week 4	Deploy the final testnet version, run tests, write the setup guide and record a short demo.	Public code, contract IDs, testnet links, instructions, and a demo video are ready for review.

6. Evidence of Completion (Required)

Important guidance: Evidence should be clear, verifiable, and easy to review by the Ambassador Chapter Lead **with minimal technical expertise**.

6.1 Planned Evidence to Be Submitted

Deliverable	Evidence Type (link, repo, demo, screenshot, doc, tx hash, etc.)	Description
Deliverable 1	Public code link, test results, screenshot	Shows agent registration, a current check result, and expired or invalid result tests.

Deliverable 2	Testnet transaction links and short video	Shows one allowed payment and three blocked payments: over the limit, unknown recipient, and after revocation.
Deliverable 3	Demo link, setup guide, contract IDs	Shows the simple demo and a guide another builder can follow.

6.2 Evidence Verification Checklist (For Ambassador Use)

For each deliverable, the Ambassador Chapter Lead will assess whether evidence is present and sufficient.

Deliverable	Evidence Present	Evidence Partial	Evidence Missing	Comments
Deliverable 1	☐	☐	☐	
Deliverable 2	☐	☐	☐	
Deliverable 3	☐	☐	☐
